TSL Crypto Whitepaper

Technology - Sustainability - Liquidity | Revised 25 October 2026

Introduction

TSL Crypto is the public project brand for TSL, a fixed-supply BEP-20 digital asset on BNB Smart Chain. Technology, Sustainability and Liquidity describe the project direction. The on-chain token name and symbol are both TSL; the full contract address is the canonical token identity.

Vision

The project prioritizes transparent documentation, straightforward on-chain transfers and disciplined development. Sustainability is a project direction; it is not a claim of measured environmental impact or an established energy partnership.

Technology & Token Identity

Project brand	TSL Crypto
On-chain name / Symbol	TSL / TSL
Network / Chain ID	BNB Smart Chain / 56
Standard / Decimals	BEP-20 (ERC-20 compatible) / 18
Official contract	0xD12ECbD5f508106ec242881530767FF15A6A7549
Total / Maximum supply	1,000,000,000 TSL / 1,000,000,000 TSL
Supply model	Fixed supply; created once at deployment

Tokenomics & Contract Behavior

Total and maximum supply are 1,000,000,000 TSL. The entire supply is created once in the constructor and assigned to the deployer. The published contract has no additional mint or burn function, transfer tax, blacklist, pause, rebase or proxy upgrade mechanism. Total supply is not circulating supply; wallet allocation labels do not establish current balances or enforceable vesting.

Administration & Verification

The contract includes an owner role. Ownership can be transferred to a non-zero address, and the owner can recover unrelated ERC-20/BEP-20 tokens sent to the contract. This recovery function cannot recover TSL itself. These powers do not permit minting, changing supply or taxing transfers. Verified source code is not an independent security audit.

Public Project References

Technology - Sustainability - Liquidity | Revised 25 October 2026

Liquidity & Allocation Transparency

Access is through the official PancakeSwap route on BNB Smart Chain. Liquidity, prices and holder balances change over time. Liquidity provision does not guarantee market stability, price appreciation or freedom from manipulation. Project allocation records must be checked against current on-chain balances; no allocation percentages or vesting guarantees are asserted as current here.

Team-Designated Pool

Network / Venue	BNB Smart Chain / PancakeSwap V2
Pair	TSL / USDT
Pool / LP token	0x47ea61fef003c1212fbcd3acc03208cb7a92cad1

This is the liquidity reference designated by the TSL team. Permissionless third-party pools are not endorsed merely because they contain TSL. A token-only swap link does not force this pool; check the route, token addresses, fees and minimum received.

Team-designated and third-party pool notice

Contract Deployment & Roadmap

The official TSL contract was deployed on 24 January 2026 at 22:57:02 UTC, in block 77,223,297. The successful creation transaction records the initial issuance of 1,000,000,000 TSL to the deployer. This is the contract deployment date; first trading and website launch dates are not established here. Roadmap phases are plans, not guarantees.

Team

The following names and roles are retained from the website review of 2 October 2026; this liquidity-document revision does not establish a new team verification.

Masoud Daniyali - Founder
Shadmehr Daniyali - Lead Developer
Daniyal Daniyali - Technical Support
Ardalan Delavari - Community & Operations
Majid Gafarzadeh - Sponsor

Liquidity & Lock Evidence

Dated transaction evidence: 24 October 2026 | Documentation revision: 25 October 2026

Liquidity Addition

At 18:13:08 UTC (21:43:08 Asia/Tehran), the successful addition transaction deposited **1,000 USDT and 10,028.917896610772865490 TSL** into the designated PancakeSwap V2 pool. It minted 2787.451503386236003580 LP to the sender. This addition alone did not lock the LP.

Liquidity addition receipt - block 129559816

Increase to the Existing Mudra Lock

A separate successful transaction at **19:00:27 UTC (22:30:27 Asia/Tehran)**, block **129566124**, added the net LP amount below to the existing lock. It did not create a new pool or extend the unlock time.

Previously locked LP	1052.215287947234081726
Gross LP submitted	2787.451503386236003580
LP fee (0.5%)	13.937257516931180017
Net LP added to existing lock	2773.514245869304823563
Total locked after increase	3825.729533816538905289
Certificate snapshot, 24 October	3825.7295 / 6155.5009 LP = 62.15% (rounded)
Unlock time (UTC)	4 September 2027, 22:16:01
Unlock time (Asia/Tehran)	5 September 2027, 01:46:01

Lock-increase receipt

Public Mudra certificate (live external reference)

Subsequent Allowance Revocation

At **19:07:28 UTC (22:37:28 Asia/Tehran)**, block **129567059**, the owner revoked Mudra's permission to spend this pool's Cake-LP from the owner's wallet. The network fee was **0.0000012129 BNB**. This did not withdraw locked LP or change the locked amount or unlock time. A future increase may require a new approval.

Successful LP allowance-revocation receipt

Evidence Scope

This revision reconciles documentation with the published GitHub liquidity-lock record reviewed on 25 October 2026. Transaction evidence is dated 24 October 2026. It is not a new live calculation of locked LP, total LP supply or coverage. The 62.15% figure is a dated certificate snapshot; the earlier 99.02% figure is historical. Neither percentage describes the total TSL supply.

Full lock record, exact amounts and receipts

Transparency & Verification

Technology - Sustainability - Liquidity | Revised 25 October 2026

Historical Initial Lock

The initial record reported 1052.215287947234081726 locked LP against certificate supply of 1062.6559 LP, or 99.02%. These initial figures are historical and are superseded by the October 24 lock increase described on the previous page. The unlock time remained unchanged.

Major Wallet Snapshot

The 4 September 2026 dossier records nine major wallets holding 100,000,000 TSL each (10% each) and a deployer wallet holding approximately 9.928%. This is a historical snapshot supplied for transparency, not a current balance measurement or a binding allocation schedule. Holdings were concentrated. Wallet labels and intended uses do not prove an on-chain vesting restriction; current balances, control and transfer restrictions must be checked separately.

Major-wallet allocation record

Public Visibility

The October 24 evidence records TSL logo, price and chart visibility in CoinMarketCap DexScan. This does not establish acceptance into CoinMarketCap's main listings or an endorsement. Provider status changes over time; use the dated status report rather than interpreting visibility as approval.
