TSL Crypto Roadmap

Technology - Sustainability - Liquidity | Revised 31 October 2026

This roadmap separates published deliverables, dated evidence and future plans. Status describes the sources reviewed for this revision; it is not a promise of platform approval or a newly measured on-chain state.

Project brand	TSL Crypto
On-chain name / Symbol	TSL / TSL
Network / Chain ID	BNB Smart Chain / 56
Standard / Decimals	BEP-20 (ERC-20 compatible) / 18
Official contract	0xD12ECbD5f508106ec242881530767FF15A6A7549
Total / Maximum supply	1,000,000,000 TSL / 1,000,000,000 TSL

Phase 1 - Foundation

Published: Fixed-supply BEP-20 contract and source references on BNB Smart Chain; on-chain name and symbol TSL; total / maximum supply 1,000,000,000 TSL. Deployed 24 January 2026 at 22:57:02 UTC in block 77,223,297; the successful creation transaction records issuance to the deployer.

Published: Official website, contract references, project repository, metadata and token list. This English Whitepaper and Roadmap revision is dated 31 October 2026 and reconciles the liquidity evidence with the published lock report.

Phase 2 - Visibility & Liquidity

Documented: The team-designated PancakeSwap V2 TSL/USDT pool on BNB Smart Chain is **0x47ea61fef003c1212fbcd3acc03208cb7a92cad1**.

Documented on 24 October: 1,000 USDT and 10,028.917896610772865490 TSL added to the designated pool; a separate transaction increased the existing Mudra lock, followed by revocation of the wallet's LP spending allowance. Details and receipts appear on the next page.

Visibility, not main-listing approval: CoinMarketCap DexScan and GeckoTerminal display market data in the recorded evidence. CoinGecko, CoinMarketCap support and Trust Wallet follow-ups remain subject to their own decisions. Consult the dated platform-status report for the latest recorded submission states.

Platform status report - 25 October 2026

Liquidity Milestone Record

Evidence date: 24 October 2026 | Documentation revision: 31 October 2026

Existing Lock Increased

The successful increase occurred at **19:00:27 UTC / 22:30:27 Asia/Tehran** in block **129566124**. The additional LP was placed in the existing Mudra lock; its unlock time was not extended.

Previously locked LP	1052.215287947234081726
Gross LP submitted	2787.451503386236003580
LP fee (0.5%)	13.937257516931180017
Net LP added to existing lock	2773.514245869304823563
Total locked after increase	3825.729533816538905289
Certificate snapshot, 24 October	3825.7295 / 6155.5009 LP = 62.15% (rounded)
Unlock time (UTC)	4 September 2027, 22:16:01
Unlock time (Asia/Tehran)	5 September 2027, 01:46:01

Wallet Allowance Revoked

The successful subsequent revocation occurred at **19:07:28 UTC / 22:37:28 Asia/Tehran** in block **129567059**, with a network fee of **0.0000012129 BNB**. It removed the wallet's LP spending permission for Mudra; it did not withdraw locked liquidity or change the lock amount or unlock time.

Dated Evidence, Not a Live Guarantee

The October 24 evidence remains historical. The latest verified coverage in this revision is 26.40547806% at block 130761527 on October 31, 2026; see the separate coverage page. The 62.15% and earlier 99.02% figures are historical snapshots. LP coverage is not the percentage of total TSL supply.

An LP lock does not prevent token holders from selling, lock all holder balances, or guarantee token value, liquidity depth or investment safety. Source verification and public records are not an independent security audit or platform endorsement.

Next Milestones

Technology - Sustainability - Liquidity | Revised 31 October 2026

Phase 3 - Transparency & Growth

Published records; ongoing verification: Maintain major-wallet allocation and liquidity-lock records with dated evidence. Reconcile older documents with later evidence; disclose supply concentration and distinguish wallet labels from enforced vesting.

Planned / ongoing objective: Grow community communication and improve documentation consistency. No community-size target or completion claim is asserted.

Planned: Evaluate ecosystem integrations and wallet discovery support. Announce completed integrations only with public evidence.

Phase 4 - Long-Term Infrastructure

Planned: Explore strategic partnerships and analytics tools; no completed partnership is claimed here.

Planned: Review liquidity depth and options before the recorded unlock time: **4 September 2027, 22:16:01 UTC / 5 September 2027, 01:46:01 Asia/Tehran**. No lock extension, future liquidity amount or price outcome is promised.

Planned research: Evaluate governance approaches and publish proposals if developed. Governance is not presented as an implemented token-contract feature.

Timing & Evidence

The contract deployment date is 24 January 2026, 22:57:02 UTC (block 77,223,297). First trading and website launch dates are not established here; no delivery deadlines are asserted. The document revision date is not a launch date. The LP unlock date is not a project completion deadline. This revision includes the block-pinned October 31 coverage snapshot and a separately identified owner-declared funding plan.

Plans may change and are subject to resources and external platform decisions. Published source or liquidity-lock evidence is not an independent audit, an investment guarantee or assurance of price stability.

Current LP Coverage

Verified snapshot: 31 October 2026 | Block 130761527

Observation: **00:31:42 UTC / 04:01:42 Asia/Tehran**. Percentages are rounded to eight decimal places. This is dated evidence, not a live or permanent coverage guarantee.

Total LP supply	14488.393374240867889520 LP
Mudra locker balance	3825.729533816538905289 LP | 26.40547806%
Project wallet - UNLOCKED	10644.415945531506582070 LP | 73.46857357%
Other LP outside Mudra/project	18.247894892822402161 LP | 0.12594837%
Total outside Mudra	10662.663840424328984231 LP | 73.59452194%
Recorded lock expiry (UTC)	4 September 2027, 22:16:01

Classification and calculation

Coverage = 3825.729533816538905289 / 14488.393374240867889520 x 100. The locker balance matches the previously verified amount for Mudra lock #112541. The October 31 check re-read LP balances; it did not re-read the internal lock schedule.

Other outside-lock LP includes protocol holdings and unspendable minimum liquidity. It is not all project-controlled or freely withdrawable. These are LP units, not TSL supply or a USD valuation. Recorded expiry in Asia/Tehran: 5 September 2027, 01:46:01.

October 31 addition - NOT LOCKED

At **00:26:59 UTC / 03:56:59 Asia/Tehran**, successful transaction block **130760898** deposited **1500 USDT + 15007.168544096243850586 TSL** into the designated PancakeSwap V2 TSL/USDT pool.

It minted **4166.378797844169253769 LP** to the project wallet, which remains **unlocked**. A separate 4.791327231459536077 LP protocol-fee mint occurred. This transaction did not increase or extend the existing Mudra lock.

Historical comparison

October 27 coverage was 37.08099981% at block 130130686. That addition of 1499.156803182113591611 USDT and 15024.633538656637886154 TSL minted 4171.747485216469959364 unlocked LP. October 24 (62.15%) and the initial 99.02% remain historical snapshots. The locked LP amount is unchanged; total LP supply increased.

Funding & Liquidity Expansion

Owner-declared project plan | Recorded 27 October 2026

Use of buyer proceeds

The project owner states that proceeds received by the project from direct sales of TSL to buyers will be allocated to adding liquidity for TSL. Implementation requires separate liquidity transactions and corresponding token inventory. This is a forward-looking project policy, not evidence that every historical sale has already funded liquidity.

Ordinary purchases on a decentralized exchange exchange assets with a pool or seller; they do not automatically mint new LP for the project. The TSL token contract has no automatic liquidity-allocation feature. Future additions should be supported by receipts, with their locked or unlocked status disclosed separately.

Milestone: USD 100,000 in designated-pool liquidity

The planned expansion threshold is **USD 100,000 of total liquidity value (TVL) in the team-designated PancakeSwap V2 TSL/USDT pool**. This means the combined USD value of both pool reserves at a stated observation time, not USD 100,000 in sales proceeds, market capitalization or locked liquidity alone. This revision does not verify that the threshold has been reached.

Planned next phase

After that threshold is verified, the project plans to evaluate and establish additional liquidity pairs with other tokens on BNB Smart Chain, followed by broader trading-market access and exchange outreach. Specific paired assets, funding allocations and launch dates have not been finalized in this revision.

Trading in the designated PancakeSwap V2 pool is already available. This milestone describes expansion of existing market access, not the first start of trading. Additional exchange listings depend on those platforms and are not guaranteed.

Evidence required for future updates

Publish the dated pool valuation supporting the milestone, receipts for liquidity additions, the addresses of team-designated new pools and their lock status. Record actual integrations or listings only after confirmation. No new lock, lock extension, price target or return is promised by this plan.
